

## New Orders for Precision Process Equipment

Precision Process announces three significant equipment orders, each for the Medical, Solar, and Connector industries; resulting in a welcome uptick for the first quarter of 2010.

“Economic challenges and changing markets, made 2009 a tough year for Precision Process Equipment; however, we are seeing signs of a recovery underway,” says Doug Stewart, VP of Sales and Marketing for Precision Process Equipment. “Maintaining up-to-date processes spanning many manufacturing industries and disciplines is key for us.” Recently adding a multi-axis turning center, Precision Process can reduce work-in-process time through the shop, improve accuracy, and at the same time, reduced overall costs.

Precision Process Equipment, along with their dedicated Machining division, offers a broad range of engineering services for RTR and all-chemical manufacturing needs. Products range from wet-process fabricating equipment, automation, tooling, design engineering, and equipment installation services.
