

## Precision Process Equipment Introduces FSP Cleaning System

To compliment Precision Process's Flexible Substrate Plating (FSP) line of products, we are introducing the FSP Reel-to-Reel Cleaning System. This continuous coil-to-coil cleaning system can be configured to handle strip widths from 25mm to two meters wide at speed up to 100 meters/min. and is available for stamped strips, wire, and tubing applications as well. Precision Process's in-line continuous strip cleaning system accommodates the use of environmentally safe, aqueous cleaning solutions for cleaning operations that need to remove chips, oils, and coolants from rolled strip material.

The modular designed cleaning system is easily configured to your requirements. Along with standard wash, rinse, and dry options, supplementary stations can be added for specialized features including but not limited to: ultrasonic cleaning, high pressure spray wash, and spot-free drying.

Precision Process Equipment personnel have been specializing in engineering wet chemical processing systems for over 40 years. Precision process offers a full line of wet processing solutions and turnkey systems for the solar, semiconductor, and microelectronics industry wet processing needs.
